

# Bubbles

Didactic Robotic Fish Kit

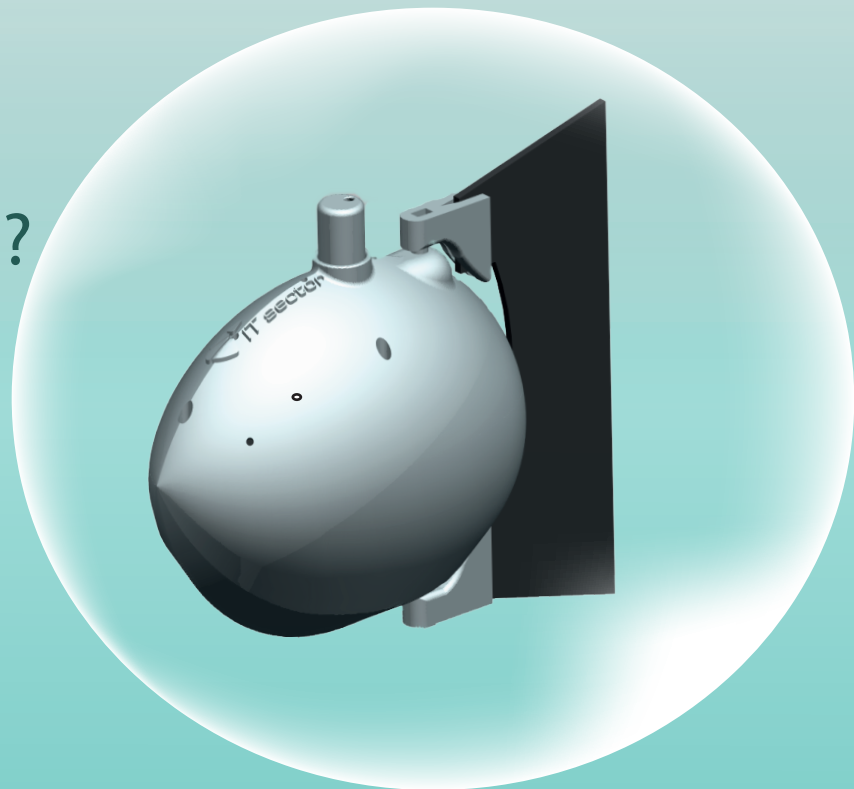

## What is Bubbles?

- an educational toy
- targeted at five to ten year old children
- intended to develop children's interest into electronics and programming.

## How is it programmed?

The programming language was created on the open source-basis of ArduBlock. This original programming language enables the user to control the robot.

## Crucial components

- Arduino Nano selected to power all the components.
- Servo DF15 to control the movement of the tail.
- A 7.4V/900mAh battery for power supply.
